

Automatic Boom Gates

(Mains and battery powered)

Access Technologies can supply and install a wide range of automatic boom gates to suit all requirements. From 2 to 8 metres long, we have boom gates to suit every application—catering for domestic, commercial, and industrial sites and car parks.

We are also one of the few companies specialising in low voltage boom gate systems—that can be solar powered for situations where running mains power is either problematic or cost prohibitive.

Product Features:

- Boom arm lengths from 2-metres to 8-metres.
- Wide range of styles—to suit every budget.
- Can be battery backed—to maintain site security in the event of a mains power failure.
- Can be solar powered - for use on remote sites, or to reduce installation costs.
- Rapid opening—to avoid traffic delays.

Rugged industrial designs are available.

We have budget designs for low duty cycle applications and narrow openings.

Most of our boom gates can be solar powered and battery backed.
