

Custom Designed Architectural Bollards

Access Technologies offers a custom bollard design and manufacturing service that can realise your custom bollard design in a minimal time. From your sketch or design concept we can rapidly provide you with a 3D rendering of the proposed design for review, through to provision of sample quantities of bollards for final design approval.

Our computer aided design, and computer aided manufacturing capability allows us to produce a high-quality product within a very short time frame. Using our rapid prototyping capability, we can even provide you with scale models of the proposed design for incorporation into your architectural models.

The benefits to your project in using our custom bollard design and manufacturing service include :

- Computer aided design capability results in a fast design turnaround, and fast design approval.
- Computer aided manufacturing capability results in full flexibility on the number of bollards produced—our service can support any quantity from one to several hundred custom bollards.
- We can provide you with scale models of your finished design for review, or incorporation into architectural models.
- We can support a full range of custom architectural finishes including galvanising, powdercoat, and a wide range of fer forgé and decorative paint finishes.
