

# The DoorJaw™

**A complete breakthrough for carpenters, DoorJaw™ provides safe, convenient clamping of doors and other construction materials during fitting.**

## Three easy steps:

- 1 Turn the bottom stabiliser bar of the DoorJaw™ at 90 degrees to the frame, and place onto a level floor area ready for use.
- 2 Place the door between the jaws and lower until the door is held firm. Use a wooden block at the other end to level the door.
- 3 Once work is complete, lift and remove the door. The jaws will automatically open ready for use again.

- > Folds flat for easy storage
- > Home or professional use
- > Saves time and money
- > Easy to use
- > Versatile - DoorJaw™ can be used with a wide range of construction materials.
